Contents

Part A once, Part B for real situations, Part C as a reference while working.

PART A — UNDERSTAND THE SYSTEM

1 Getting started
Opening, signing in, roles, phones

2 The big picture — full flows
Patient, money, stock and reminder flows

3 Finding your way around
Menu, Home, search, bell

PART B — WALKTHROUGHS: REAL SITUATIONS, START TO FINISH

4 New client, sick pet
Reception → doctor → bill → payment

5 Vaccination & deworming visit
...and how the reminders follow

6 Booked appointment & home visit
Booking → check-in → visit

7 A surgery case
Plan → consent → theatre → home

8 A ward admission
Admit → treatment chart → discharge

9 Pet store: walk-in & delivery orders
Quick sale, COD, pay later, cancel

10 Money owed & collecting it
Promise → reminder → payment

11 Stock arrives, counts & corrections
Supplier delivery, shelf count, sizes

PART C — REFERENCE: EVERY SCREEN

12 Pet owners & pets

13 Queue & appointments

14 The visit (doctor's screen)

15 Surgery & ward

16 Billing, payments & unpaid bills

17 Pet store & home deliveries

18 Inventory, sizes & suppliers

19 Follow-ups: due list, messages, tasks, alerts

20 Full histories & printing

21 Expenses & reports

22 Owner & admin

23 Daily, weekly & monthly routines

24 Privacy & built-in safety

25 Quick answers & glossary

How to read this guide

Words in a grey box such as **Today's queue** are names you see on screen. A maroon box such as **Check in a pet** is a button you press. Arrows → mean "then". Role labels such as **Reception** show who normally does a step.

1 Getting started

One web address, any device, no installation.

Opening the CRM

The CRM is a website. Open it in Chrome, Edge or Safari on any computer, tablet or phone:

bdah-crm.bindawoodanimalhospital.workers.dev

> **Make it one tap away**
>
> On the reception computer, bookmark the address. On a phone, open it and choose *Add to Home screen*; it then opens like an app. Everything works on a phone, including the queue, the pet store and the ward chart.

Signing in and out

1. Type the email and password the owner gave you, then press **Sign in**.
2. You land on **Home**, which shows only what your role is allowed to use.
3. When you finish, open the menu at the bottom-left (your name) → **Sign out** — always on shared computers. Sign-ins and sign-outs are recorded.

> **Forgot your password?**
>
> There is no self-service reset on purpose. Ask the owner, who resets it in **Staff**. If you see "*your account isn't active yet*", the owner hasn't activated your account — ask them to **Activate** it in Staff.

Accounts and roles

Everyone has their own login — never share it, because every action is recorded under the person signed in. What you see depends on your **role** (a person can have several):

Role	Typical person	Main areas
Owner	Dr. Musab	Everything: staff, permissions, reports, activity log, settings. **The only person who sees pet owners' phone numbers and email.**
Senior Doctor	Experienced vets	All clinical work, surgery, ward, reopening records, approving vaccine schedules, billing
Junior Doctor	Newer vets	Consultations, prescriptions, vaccines, deworming, tests
Intern	Trainees	Viewing records and assisting

Reception	Front desk	Owners & pets, queue, appointments, bills, payments, due list, tasks
Finance / Manager	Accounts	Bills, unpaid bills, approvals, expenses, financial reports
Inventory	Pharmacy	Stock, shelf count, sizes, expiry, suppliers, borrowed & lent stock
Store Staff	Pet-store counter	Pet store sales, deliveries, cancelling orders — no medical records

The owner can see and change every role's permissions in `Who can do what` (chapter 22). If a page says you don't have access, your role doesn't include it.

2 The big picture — full flows

Four flows run the whole hospital. Learn these and every screen makes sense.

Everything hangs off two records: the **pet owner** (the paying client) and the **pet** (the patient). A family can share pets; each pet has one *primary* owner who receives reminders and bills.

Flow 1 — The patient's journey

Owner + pet registered → **Check-in (token)** → **Waiting** → **With doctor** →
Consultation · Rx · vaccine · deworming · tests → **Ready to pay** → **Bill & payment** → **Done**

Side branches from the visit: **Plan surgery** → surgery flow (chapter 7) and **Admit to ward** → ward flow (chapter 8). Their work and costs stay linked to the same pet and visit.

Flow 2 — Money

Visit / pet store cart → **Bill (draft)** → **Checkout** → **Paid in full**

Checkout → **Part / no payment → *Pay later*** → **Unpaid bill with promised date** → **Reminders**
→ **Receive payment** → **Closed**

Corrections never delete money: a bill is **voided**, items are **returned**, money is **refunded**, a lost debt is **written off** — each with a reason, each recorded.

Flow 3 — Stock

Supplier delivery / Add stock / borrowed → **Shelf (batches & expiry)** →
Billed medicine / pet-store sale / lent

Returns and cancelled orders put stock back. **Shelf count** corrects the numbers to what is really there. Low and expiring items appear on Home and in Inventory.

Flow 4 — Reminders

Doctor sets next date → **Due & follow-ups** → **WhatsApp prepared (−3, 0, +3, +7 days)** →
Owner sends → **Pet returns, dose recorded** → **Reminder closes itself**

The same engine prepares follow-up reminders and payment reminders. If nothing happens, reception is alerted, then the owner (escalation).

3 Finding your way around

The menu, the Home page, the smart search and the bell.

The menu (left side; ☰ on a phone)

Section	Pages
Today	Home · Today's queue · Appointments · Surgery · Ward
Follow-up	Messages to send · Tasks · Due & follow-ups · Alert centre
Records	Pet owners · Pets
Money & stock	Billing · Unpaid bills · Pet store · Home deliveries · Inventory · Borrowed & lent stock · Suppliers · Expenses · Reports
Admin	Staff · Who can do what · Activity log · Vaccines & schedules · Reminder settings · Settings

You only see the pages your role allows. The top bar always has the **search box**, the **bell** and **+ New** (new owner + pet).

Home — your starting point every morning

- **Greeting card** — date and greeting in Pakistan time, a one-line summary and the big search box.
- **Quick actions** — the jobs for your role: **Check in a pet**, **Pet store sale**, new owner…
- **Today's numbers** — waiting, appointments left, vaccines due today, pets in the ward, money collected.
- **Needs attention** — appears only when something must be done: overdue reminders, money owed, messages to send, your tasks, deliveries, low stock, overdue loans. Tap a line to go straight there.

Smart search — find anything in seconds

Press `Ctrl + K` or `/` anywhere, or tap the search box. It searches owners, pets, bills, products and today's tokens together and forgives spelling mistakes.

Type…	To find…
`ahmed` / `ahmad raza` / `احمد`	An owner by name — English or Urdu, typos allowed
`tiger ahmed`	Pet "Tiger" belonging to "Ahmed" (`tigr ahmad` also works)
`johar town`	Owners by area
`C-00012` / `P-00034`	An owner or pet by ID (printed on cards and bills)
`#5`	Today's token number 5
bill number, e.g. `BD-26-000123`	A bill

`royal canin`, a barcode	A product or service, with stock
microchip number, colour, breed	A pet
`pet:` / `owner:`	Only pets or only owners
`0300 1234567` or `4567`	An owner by phone — **hospital owner only**; for other staff a number finds nothing

> **Reading the results**
>
> Labels warn you at a glance: **Alert** (allergy / critical warning), **Owes Rs. …**, **Out of stock**, **Inactive**. Use arrow keys + Enter; Tab switches between All / Owners / Pets / Bills / Items. Recent picks show when search opens.

The bell

Your notifications: tasks given to you, alerts for your work, escalated reminders. Tap one to open it.

4 Walkthrough: new client, sick pet

Mr. Bilal walks in with his dog Moti, who has been vomiting for two days. He has never been here before.

Register → **Check in** → **Doctor** → **Prescription** → **Bill** → **Payment** → **Done**

Reception 1 · Is he already registered?

1. Open **Today's queue** → **Check in a pet**. Type the pet's or owner's name ("moti bilal").
2. Nothing found? The dialog says "*No pet found. Is this a new customer?*" — press **Register new owner + pet**.

Reception 2 · Register owner and pet in one form

1. Owner: full name (Urdu name optional), area, house, block, address, city, preferred contact and message language (Urdu/English), how they found us.
2. If a similar name already exists the form warns "*Possible existing customer*" — open it instead of creating a duplicate.
3. Pet (same form): name, species, breed, sex, neutered, date of birth or approximate age, colour, microchip.
4. Save. Owner gets an ID like `C-00012`, the pet `P-00034`.

> **Phone number**
>
> Reception doesn't type the phone number — it is private. Tell the owner (Dr. Musab) the client's number, or the owner adds it from the client's page → **Edit**. Reminders are sent by the owner using it.

Reception 3 · Check in

1. Choose Moti, write the reason ("*vomiting 2 days, not eating*"), choose a doctor or *Any doctor*, tick **Urgent** if it is an emergency.
2. Moti gets today's **token** (e.g. #7) and appears in **Waiting** on every screen at once. Tell Mr. Bilal his token.

Doctor 4 · Examine and treat

1. On the queue press **Call in** on Moti's card (it moves to **With doctor**), then **Open visit**. Red alerts (allergies) show at the top.

2. **Consultation** tab: complaint, history, vitals (temperature, heart rate, breathing, weight, mucous membranes, CRT, hydration, body condition, pain), examination, diagnosis (mark one *primary*), treatment and medicines given in the clinic. It saves as you type.

3. Tests needed? **Tests** tab → order blood work / X-ray; press **Tests** on the queue card to move it to **In treatment** while waiting, and **Treatment done** when finished. Enter the results later.

4. **Prescriptions** tab: each medicine with strength, dose, frequency, days, route, quantity and instructions → **Issue prescription** → print it for the owner.

5. Follow-up needed? Set the follow-up date in the consultation — a reminder is created automatically.

6. Press **Finalize** on the consultation, then **Done with doctor** on the queue card — it moves to **Ready to pay**.

Reception 5 · Bill and take payment

1. On the visit press **Bill this visit**. Consultation, medicines given and items from the visit are offered in one tap; add anything else from the price list.

2. Discount? Per line or for the whole bill, with a reason (large discounts need a manager's approval).

3. **Checkout**: cash, card, bank transfer, JazzCash/Easypaisa (with transaction ID) — or split between methods. Paying only part? Choose **Pay later** (chapter 10).

4. Print the receipt or the full bill, then **Paid — finish** on the queue card (**Done**). Billed medicines leave stock automatically.

> **What the system did for you**
>
> Created the records, the token and the visit timeline; linked the prescription and bill to Moti; reduced stock; created any follow-up reminder; and recorded who did each step.

5 Walkthrough: vaccination & deworming visit

Mrs. Sana brings her 10-week-old kitten Snowy for her first vaccine and deworming. Check in and bill as in chapter 4.

Doctor Record the vaccine

1. Open the visit → **Vaccines & deworming** tab.
2. Choose the vaccine (e.g. **Biofel PCH**), batch number, dose, route and site. If an approved schedule applies, the **next dose** name and date are suggested — check or change them.
3. A blue **What happens next** box shows the exact dates: when the owner's WhatsApp reminder is prepared and when reception is alerted.
4. Save. Any earlier reminder for this dose is closed automatically. Print the **Vaccination card** for Mrs. Sana from the same panel.

Doctor Record the deworming

1. In the **Deworming** card below: dewormer given (suggestions from the price list), dose, weight.
2. **Next deworming due** is suggested from age: **every 2 weeks** under 12 weeks, **monthly** until 6 months, then **every 3 months**. Tap 2 weeks / 1 month / 3 months or pick a date. Clear it for no reminder.
3. Press **Record deworming**. Wrong entry (vaccine or deworming)? **Void** / **Entered by mistake** with a reason — the old reminder comes back.

What happens next — automatically

When	What happens	Who acts
From today → 3 days before	Listed in **Due & follow-ups** (**Upcoming**); 3 days before, a WhatsApp reminder in Mrs. Sana's language appears in **Messages to send**.	Owner presses send
On the due day	Moves to **Today**; another reminder; reception alerted.	Reception calls
3 and 7 days after	Moves to **Overdue**; further reminders; reception alerted again; escalates if still nothing.	Reception / owner
Snowy comes back	The new dose is recorded → every remaining reminder stops by itself.	Doctor

6 Walkthrough: booked appointment & home visit

A client phones to book a grooming at home for Saturday.

Book → **Confirmed** → **Check in** → **Visit** → **Bill (home visit charge)** → **Done**

1. Reception Appointments → Book appointment. Search the owner or pet name, choose the pet, type (e.g. Grooming), date, time and doctor.
2. Where: **At hospital** or **Home visit**. For a home visit the address is filled from the client's profile — change it if the visit is elsewhere.
3. On the day, open the appointment → **Check in**. It goes straight into today's queue with a token — no re-typing. If the pet is already in the queue, it joins that visit (no second token or bill).
4. Doctor works on the visit as usual. The visit shows **Home visit** with the address.
5. Reception Bill this visit — the bill inherits "Home visit" and its address; add the **home visit charge** (price editable by distance).

When things change

- **Client cancels** — Cancel the appointment with a reason.
- **Client doesn't come** — on the appointment's ⋮ menu choose **Didn't come (no-show)**; it shows in their history and the Alert centre to rebook.
- **Wrong place** — on the visit or bill press **Change** next to the service location.

7 Walkthrough: a surgery case

Bruno needs a spay. Consent and pre-op checks are required before the operation can start.

Plan → **Scheduled** → **Consent** → **Admitted** → **Pre-op check** → **Surgery** → **Recovery** → **Going home**

1. Doctor From the visit press **Plan surgery** (or Surgery → Plan a surgery): procedure, why (indication), urgency, surgeon, date & time, **estimate told to owner (Rs.)** with notes, and instructions before surgery (e.g. fasting).
2. **Mark as scheduled** when the date is fixed. It appears on the Surgery board.
3. Reception / Doctor **Owner consent**: print the consent form (Urdu or English) for the owner to sign → Record consent: who gave consent, relationship, how (signed paper / signed on screen / verbal by phone), confirm risks and estimate were explained.
4. On the day: **Pet arrived — admit**.
5. **Start pre-op**: weight, temperature, heart and breathing rate, ASA class, fasting confirmed, the checklist → **Mark pre-op check complete**.
6. **Start surgery** — the system refuses without consent and the pre-op check. (A life-saving emergency uses **Start emergency surgery** with a reason, recorded.)
7. **Anaesthesia & operation**: drugs, times, team, operation notes, complications, **Materials used**.
8. **Operation finished — recovery**: recovery notes. Need more care? **Keep in ward** (chapter 8). Complication? **Back to theatre**.
9. **Discharge — going home**: home-care instructions (printed), post-op check date → print the discharge sheet.

Cancelling and reopening

Cancel surgery asks for a reason (e.g. owner withdrew consent). A discharged record can be reopened by a senior doctor with a reason; the discharged version is kept.

8 Walkthrough: a ward admission

Coco has parvo and needs IV fluids for three days.

Admit → **Treatment chart** → **Doses given / not given** → **Notes & vitals** → **Discharge**

1. Doctor From the visit press **Admit to ward** (or Ward → **Admit a pet**): reason for stay ("*Parvo — IV fluids & monitoring*"), kennel / cage, doctor in charge, expected to go home, feeding plan ("*nothing by mouth 12 h*"), care / handling notes ("*bites when touched*").

2. **Treatment chart** → add each treatment: what (Ringer's lactate, Ceftriaxone…), dose, route (IV/SC/oral), **every (hours)**, first dose at, for how many days, instructions.

3. Ward staff The ward board shows every dose that is due. When given, press **Given**; if not, **Not given** with the reason. Time and person are recorded.

4. Add **Notes & vitals** during the stay. Changed plan? **Stop** a treatment (with a note) and add the new one.

5. **Discharge**: outcome, summary of the stay, home-care instructions, check-up date → print the discharge sheet. Bill the stay from the visit.

Night shift

Open Ward on a phone — the due doses are listed in time order, so nothing is missed between shifts.

9 Walkthrough: the pet store

A walk-in buyer, a phone order for home delivery, and a cancelled order.

Store staff A · Walk-in customer buys cat food — in seconds

Name + Enter → **Tap / scan** → **Cash, Enter** → **Next customer**

1. Open `Pet store`. Ask the customer's name and type it in the **Customer name** box. A registered client shows up — tap them. Otherwise press `Enter` (or tap **Bill as walk-in: Ali**): the name goes on the bill and receipt, with no registration and no phone number.
2. The **quick picks** at the top are the 8 best sellers of the last 30 days — tap one to add it.
3. Or scan the barcode / type in the search; when only one product matches, `Enter` adds it. Products with sizes show one card with a button per size; greyed-out sizes are not available.
4. Change quantity in the cart if needed. Items with a typed price show a price box.
5. Type the cash received and press `Enter`. The sale finishes on the same screen showing **change due** and a print button — the screen is ready for the next customer.

> **Name optional, registration not needed**
>
> A walk-in sale works with no name at all, or with just a walk-in name (shown as "Ali (walk-in)" in Billing and on the receipt). A registered client is needed only for home delivery, pay later, or to keep the sale on their account.

Store staff B · Phone order for home delivery, cash on delivery

Cart + owner → **Home delivery** → **On delivery** → **Dispatch (rider)** → **Delivered** → **Receive payment**

1. Add the products, then attach the pet owner (search name or pet).
2. Choose **Home delivery**. The address fills from their profile — correct it for this order if needed. Check the **delivery charge** (Rs. 50 by default from the price list; change by distance — only staff allowed to give discounts can make it Rs. 0).
3. How will they pay? **Pay now** (cash, card, bank, JazzCash/Easypaisa — enter the transaction ID), **On delivery** (cash on delivery), or **Pay later** (optional date).
4. Confirm and print the receipt to send with the order.

5. Open `Home deliveries`: the order is **Pending**. Before it leaves you can **Edit** the address or charge. Press **Dispatch** and write the rider's name.

6. When it arrives: **Delivered**. For cash on delivery, record the money the rider brings with **Receive payment** on the bill. If it stays unpaid after delivery, payment reminders start.

Store staff C · The customer cancels

1. On the order (in `Home deliveries` or on the bill) press **Cancel order**. Type a reason if you like ("*Customer cancelled on the phone*") — it's optional.

2. The system refunds any money taken (same method), puts the stock back on the shelf, closes any unpaid balance, marks the bill "Cancelled", and records it in the activity log.

3. Find it later under **Cancelled** in `Home deliveries`.

> **Who can cancel**
>
> Store staff: orders not yet delivered and today's counter sales. Delivered or older orders: the owner. A product can never be sold at Rs. 0 — the system refuses.

10 Walkthrough: money owed & collecting it

Mr. Kamran's bill is Rs. 8,000. He pays Rs. 3,000 now and promises the rest next week.

Checkout: part payment → **Pay later** → **Unpaid bills** → **Reminder** → **Receive payment** → **Closed**

1. Reception At checkout enter Rs. 3,000 and choose **Pay later**. Note and **Expected by** date are optional — left empty it says "Payment to follow", a week from today.

2. The bill is issued; Rs. 5,000 appears in Unpaid bills and on his page as **Owes Rs. 5,000** (also in search results). Larger amounts may show "*waiting for manager approval*" — a manager presses **Approve** in Unpaid bills or the Alert centre.

3. Around the promised date a payment reminder is prepared in Messages to send. Overdue amounts are highlighted and appear in **Needs attention**.

4. He pays: open the bill (or his page → **Account history**) → Receive payment → amount and method. The bill closes when the balance is zero.

Other situations

Situation	What to do
He asks for more time	Unpaid bills → **New promised date**, with a note.
He pays towards all his bills at once	His page → **Account history** → **Payment towards balance**; it is applied to his oldest bills.
He pays in advance	Same screen → **Advance / deposit**. Shown as **Unused advance** and used on his next bills.
The money will never come	Manager/owner → **Write off** with a reason. Recorded and shown in reports.
Pet-store order paid on delivery	Payment reminders start only after it is delivered and still unpaid.
Client wants a statement	His page → **Statement** → print: every bill and payment and what is owed.

11 Walkthrough: stock arrives, counts & corrections

From the supplier's van to an accurate shelf.

Inventory A · A supplier delivery with a bill

Suppliers → **Receive a delivery** → **Lines: qty · cost · batch · expiry** → **Stock up** → **Pay supplier**

1. Suppliers → choose the supplier (or New supplier once: name, contact person, phone, address, NTN) → Receive a delivery.
2. Enter the supplier's bill number and date, then **Add line** for each product: quantity in pieces, cost per piece, batch number and expiry.
3. Check the total against the paper bill → Receive into stock. Stock goes up, cost is kept for profit reports, and **You owe** increases.
4. When you pay them: **Pay supplier** → amount, method, paid on, reference / cheque no. **Deliveries** and **Payments made** show the history.

Inventory B · Quick top-up without a supplier bill

1. Open the product (Inventory → tap it) → Add stock.
2. Type **how many pieces** arrived. Batch and expiry are optional. Save — tracking switches on by itself.

Inventory C · Shelf count — make the numbers true

1. Inventory → Shelf count. Every product is listed with what the system thinks is there.
2. Count the shelf and type the real number in each box (leave untouched ones empty). Add a note such as "Monthly count".
3. Save. Where the shelf has less, the soonest-expiring stock is taken off first; where it has more, the extra is added. Every change is recorded. The **Uncounted** tile on Inventory shows products never counted.

> **First time**
>
> Do one full shelf count when you start, then monthly. For a single product use **Set the count** on its page.

Inventory D · Sizes — one product, many weights

1. New product sold in sizes: New item → **Product with sizes** → name once, then each size with its price (and opening quantity).

2. Existing separate products ("RC Kitten 2kg", "RC Kitten 4kg")? Inventory → Sizes shows suggestions — combine them in one tap.

3. A size runs out at the distributor? On the product's **Sizes** card switch it to **not available**; it greys out in the pet store and is flagged on bills. Switch back when it returns.

Inventory E · Borrowing from / lending to a nearby shop

1. Borrowed & lent stock → record **borrowed** or **lent**, the partner, products, quantities and the expected return date.

2. Stock moves immediately. When it comes back (all or part), record the return on the loan. Overdue loans show on Home.

12 Pet owners & pets

Reference — register once, use forever.

Pet owners list

Pet owners lists every client, newest first, with their pets. Filter by name, area or ID. + New registers a new owner (with an optional first pet).

The owner page

Part	What it does
Contact	Address, area, preferred contact, how they found us, campaign opt-in, notes. Phone numbers and email: owner only (others see a lock note).
Pets	All their pets; add another pet.
Unpaid bills	What they owe and promised dates.
Deliveries & home visits	Every home delivery and home visit with its address and status.
Log contact	Record a call, WhatsApp or visit and its outcome (**Log a call / reply**). Appears in their history.
Buttons on top	**Edit**, New bill, **Pet store sale**, **Book appointment**, **Full history — all pets**, **Account & statement**, **Merge**.

The pet page

- **Identity** — species, breed, sex, neutered, age, colour, microchip, tag. **Edit** to change.
- **Alerts** — **Add alert**: allergy, condition or handling warning with severity. Critical ones show in red on the pet, the visit and every search result. Add them the moment you learn them.
- **Weight** — add weights; the change since last time is shown.
- **Owners** — **Add another owner**, or make someone primary (the primary owner gets reminders and bills).
- **Timeline & due** — a summary of visits and what is due; Full medical history shows everything (chapter 20).

Duplicates and merging

If the same person was registered twice, the owner opens the record to remove → **Merge** → searches the record to keep → confirms with a reason. Pets, visits, bills, payments, messages and tasks all move to the kept record; nothing is lost.

Removing a pet owner or pet added by mistake

Staff: Ask Mr. Musab to remove → **Owner notified now** →

Reminded 10am · 1pm · 4pm · 7pm · 10pm → **Deleted or kept**

- **Everyone else** At the bottom of the pet owner's or pet's page: "*Only the owner, Mr. Musab Bin Dawood, can remove…*" → **Ask Mr. Musab to remove** (reason optional). The page then shows the request is waiting; **Remind him again** sends another reminder.
- **Owner** The bell, Home (**Please remove — added by mistake**) and **Removal requests** list every request. Open the record → **Delete**, or **Keep — decline** with a note. Reminders stop once handled.
- Only records **never used** can be deleted — no visits, appointments, bills, payments, medical records or messages. Deleting a pet owner also deletes their pets that belong to nobody else. A duplicate with history is **merged** instead.
- Only the owner can delete; this can't be given to any other role. Every deletion is in the activity log.

13 Queue & appointments

Reference — the live board of the day.

Queue stages and buttons

Stage	Meaning	Button to move on
Waiting	Checked in, token given	**Call in**
With doctor	Being examined	**Done with doctor** or **Tests**
In treatment	Tests, drip, procedure in the clinic	**Treatment done**
Ready to pay	Done with the doctor — collect payment	**Paid — finish**
Done	Visit finished	—

Each card shows token, pet, owner, reason, waiting time and doctor. The ⋮ menu has **Move to** (any stage), **Assign doctor**, **Open visit**, **Pet profile** and **Remove from queue** (kept in history as cancelled). Urgent cases are highlighted. The board updates live on every device; tokens restart at 1 every day (Pakistan time).

> **One pet, one visit per day**
> Checking in a pet already in today's queue joins the existing visit — no second token, no second bill.

Appointments

- Book appointment: owner/pet, type, date, time, doctor, urgent, reason, instructions before the visit, and **At hospital / Home visit** (address).
- Statuses: booked → confirmed → checked in (becomes a visit). Or cancelled (reason) / **Didn't come (no-show)**.
- Edit or reschedule from the appointment's ⋮ menu. Missed appointments appear in the Alert centre as "*Call to rebook*".

14 The visit (doctor's screen)

Reference — everything for one pet's visit on one screen.

The top shows pet, owner, token, status, service location (clinic / home visit with **Change**) and any **allergy alert**. Buttons: Bill this visit, **Plan surgery**, Admit to ward, **Full history**. Tabs:

Tab	Contents and rules
Consultation	Complaint, history, vitals, examination, diagnoses (one primary), treatment, medicines given in clinic, follow-up date, doctor's private notes (never printed). Saves as you type. **Finalize** locks it; to correct, a senior doctor uses **Reopen to correct** with a reason — every version is kept.
Prescriptions	Medicines with strength, dose, frequency, duration, route, quantity, instructions and advice → Issue prescription → print. Issued = locked; to change, cancel and issue a new one.
Vaccines & deworming	Vaccine with batch, dose, route, site and next dose (from the approved schedule) with the **What happens next** plan; void with a reason if wrong; **Vaccination card** print. Deworming with product, dose, weight and next date (age-based suggestion); **Entered by mistake** to undo.
Tests	Order with reason and urgency → enter results (findings, values, impression) → **Save result** → senior doctor reviews. Pending and unreviewed tests appear in the Alert centre.

Vaccines available

Includes the **Bioveta range**: Biofel PCH, Biofel PCHR (cats), Biocan Puppy, Biocan Novel DHPPi/L4, DHPPi/L4R, Biocan R (rabies), Biocan M (ringworm), plus the clinic's existing vaccines. Owner / senior doctor add more in `Vaccines & schedules`.

15 Surgery & ward

Reference — the boards and the rules.

Surgery board

`Surgery` lists planned, scheduled and in-progress operations with consent and pre-op status. Each surgery page follows: **Plan** → **Estimate** → **Owner consent** → **Pre-op check (on the day)** → **Anaesthesia & operation** + **Materials used** → **Recovery & going home** → **History**. Full flow in chapter 7.

Rule	Why
No start without consent and pre-op check	Protects the pet, the owner and the doctor.
Emergency start needs a reason	Life-saving cases are possible but always explained.
Consent can't be edited	If the owner withdraws, revoke it (reason) and record a new one.
Signer's phone on consent	Entered and seen by the hospital owner only.

Ward board

`Ward` shows each admitted pet with kennel, reason, doctor, expected discharge and doses due now/overdue. Each stay page has **Why here**, **Plan**, **Treatment chart** (Given / Not given / Stop), **Notes & vitals**, **Owner** and **Discharge**. Full flow in chapter 8.

16 Billing, payments & unpaid bills

Reference — accurate bills and every rupee accounted for.

Billing list

Billing shows clinic bills and pet store sales with status, today's collected total and **Cash in drawer (today)** (cash received − cash refunds). New bill starts a bill for any owner; most bills start from a visit with Bill this visit.

A bill's life

Draft → **Checkout (issued)** → **Paid / part paid** → **Return · Refund · Void**

- **Draft** — add services/products (**Add service or product**), quantities, item discounts, bill discount (reason), tax. Price-list prices are fixed; items like "Other charge" let you type the price.
- **Checkout** — one or several payment methods; pay later for the rest. A double tap or lost internet never records a payment twice.
- **Issued** — locked. Print the bill or receipt. Receive payment for later payments.

Corrections — never delete, always explain

Action	When	What happens
Return items	Product/medicine brought back	Choose lines and quantities; refund calculated fairly even with discounts; stock goes back.
Refund	Money back without a return	With reason and method (shown in Data checks).
Void bill	Bill made by mistake	Cancelled with a reason; stays visible.
Cancel order	Pet-store / delivery order	Refund + stock back + void in one step (chapter 9).
Write off	Debt will never be paid	Manager/owner, with reason.

Unpaid bills

Unpaid bills lists every balance with promised date, days late (colour-coded) and approval status. Actions: **Receive payment**, **New promised date**, **Approve / Not approved** (manager), **Write off**. Total outstanding is shown at the top.

Owner account & statement

Owner page → **Account & statement**: **Account history** (every bill and payment, charged vs paid/credit, balance), **Receive payment** towards the whole balance (oldest bills first, extra kept as advance), **Take advance / deposit** (e.g. surgery deposit), **Statement** print.

17 Pet store & home deliveries

Reference — the counter and the delivery board.

Feature	How it works
Quick picks	Top 8 sellers of the last 30 days, one tap each.
Search & scan	Name, SKU or barcode; Enter adds the only match. Out-of-stock and not-available items are flagged.
Sizes	One card per product, one button per size; unavailable sizes greyed out.
Typed prices	Items with an editable price show a price box in the cart.
Customer	Optional. Search a registered client, or type a walk-in's name + Enter to put it on the bill. A registered client is required for delivery and pay later.
Payment	Pay now (split methods, transaction IDs), On delivery, Pay later. Enter in the cash box pays.
After the sale	Inline bar with change due, print and New sale; **Clear** empties the cart.

Home deliveries board

Pending → **Dispatched (rider)** → **Delivered** or **Cancelled**

Pending orders can be **Edit**ed (address, charge with note). Once dispatched, address and charge are locked; once money is taken, the charge is locked. Delivered is final. Views: to send, on the way, delivered, **Cancelled**.

18 Inventory, sizes & suppliers

Reference — know what you have, what is expiring and what to order.

Inventory page

Two tabs: **Stock** (quantities, batches, expiry) and **Price list** (every service and product, grouped by product with sizes). Tiles: **low / reorder**, **expiring in 60 days**, **expired on the shelf**, **uncounted**. Buttons: New item , Shelf count , Sizes .

A product's page

Card	What you can do
Stock	Add stock (pieces, optional batch/expiry), **Set the count** (what's on the shelf now).
Batches	Each batch with quantity and expiry; **Adjust** with a reason (damaged, expired, found).
Sizes	**Add a size**, available / not available switch, **Remove this size from the group**, **Make this a product with sizes**.
Stock history	Every movement: received, sold, billed, returned, counted, adjusted, loaned — with who and when.
Details	Price, category, unit, barcode/SKU, reorder level, editable price, retail (pet store) or clinic use. Untick **Active** to hide an item you no longer sell.
Delete	Appears only on items **never used** (no bills, stock or history) — e.g. created by mistake. Confirm, optionally with a reason; it's recorded in the activity log. Used items can't be deleted — hide them instead.

New item

Choose service or product; for products the **opening quantity** (pieces on the shelf now) and reorder level; or **Product with sizes** to enter every size at once.

Suppliers & loans

Supplier page: contact, **You owe**, **Deliveries** (open, received or cancelled), **Payments made**, Receive a delivery , **Pay supplier**. Borrowed & lent stock: see chapter 11.

> **Good habits**
>
> Every Monday check **Expiring in 60 days**; monthly do a shelf count; set reorder levels so low-stock alerts work.

19 Follow-ups: due list, messages, tasks, alerts

Reference — the system remembers so staff don't have to.

Due & follow-ups

Vaccine doses, deworming and follow-up visits, under **Upcoming**, **Today** and **Overdue**. Each line: pet, owner, what is due, date, days late. Actions:

- **Contacted** — record what the owner said (booked, will come…).
- **New date** — reschedule with a note.
- **Not needed** — close it with a reason (e.g. pet moved away).
- Recording the dose on a visit closes it automatically. Tap **How next-dose reminders work** at the top for the full explanation.

Messages to send

Prepared every 30 min → **Open WhatsApp** → **Press send in WhatsApp** → **Sent**

Vaccine, deworming, follow-up and payment reminders, in the owner's language. Press **Open WhatsApp** (message already written) → send → **Sent**. Or **Couldn't reach** / **Skip** with a note. Calls show **Called — done**. Every message stays in the owner's history. Phone numbers are private, so **only the hospital owner sends them**; others see "the number is private — the owner sends this one".

Campaigns

Messages → **Campaigns**: friendly messages to a group — *pets with a birthday this month* or *pets not seen for 6+ months*. Name it, write the message; it goes into Messages to send in each owner's language. Only owners who opted in to campaign messages are included.

Tasks

New task: what, for whom, due time, priority (Low / Normal / High), linked owner/pet. Flow: open → **Start** → done (write *what was done*) or **Cancel task** (why). Comments with **Add**. Your tasks show on Home; overdue ones in red.

Alert centre

Everything unfinished across the hospital, each with what to do: unfinished records (*finish & finalize*), tests pending / to review, overdue vaccines and follow-ups, missed appointments (*call to rebook*), pay-later approvals (*approve or reject*), unpaid and promised-today bills, low/expiring stock, escalated items. Viewing doesn't close an item — finish it in its own screen. On an overdue item or unpaid bill, **Pause reminders** stops its reminders until a date, with a required reason (e.g. owner abroad until the 15th).

20 Full histories & printing

Reference — the complete story, on paper when needed.

A pet's full medical history

Pet page → Full medical history. Every episode newest first — visits, vaccinations, dewormings, surgeries, ward stays and bills. Opening one shows who brought the pet, doctor, check-in, timeline; consultation; prescriptions (who prescribed); vaccines and deworming (batch, who gave, next due); tests (ordered/entered/reviewed by); surgery team; every ward dose and by whom; and the bill. The summary on top: visits, first/last seen, vaccinations, surgeries, stays, billed and owed, doctors and every medicine ever given. Filter by type, doctor or year, or search inside.

An owner's full history — all pets

Owner page → **Full history — all pets**: one family timeline with every pet's visits in full, appointments (including missed), payments and refunds (who received them), and every call or message with its outcome.

Everything you can print

Print	From
Bill / receipt	Any issued bill, or after a pet-store sale
Prescription	Visit → Prescriptions → issued prescription
Vaccination card	Visit → Vaccines & deworming
Surgery consent form	Surgery → Owner consent
Discharge sheet (surgery / ward)	Surgery or ward stay → discharge
Account statement	Owner → Account & statement
Full pet / owner history	The history pages → Print full history

Prints use the clinic letterhead from Settings. Doctors' private notes are never printed. Phone numbers appear on prints only when the owner prints them.

21 Expenses & reports

Reference — where the money goes and how the clinic is doing.

Expenses

Add expense: category (rent, electricity, salaries, supplies…), amount, date, method and note. Visible only to finance staff. Expenses feed the profit estimate.

Reports

Pick a period (today, 7 / 30 days, this month, last month, 3 months, this year or custom) → **Show**. Every report has **Export** (Excel or CSV).

Report	What it tells you
Money	Billed, collected (cash actually received), refunds, owed, advances, estimated profit after stock cost and expenses; by payment method and by service.
Clinic activity	Visits, new owners and pets, appointments kept and missed, busiest days, work per doctor, doses given.
Medicines & stock	Used and sold, stock value, low and expiring items.
Data checks	Things to tidy: bills owing with no promise, refunds without returns, duplicate-looking owners, pets without date of birth, items with no reorder level or cost, Rs. 0 prices.

> **"Billed" vs "Collected"**
>
> Billed = value of bills issued. Collected = cash actually received in the period. The difference is what clients still owe.

22 Owner & admin

Reference — staff, permissions, oversight and clinic settings.

Staff — joining and leaving

Add staff → **Give email + temporary password** → **They sign in** → **Deactivate when they leave**

1. Staff → Add staff: full name, email, mobile, job title, temporary password, **Doctor** (with PVMC registration no.), and their **roles**. A role can be given **until** a date (e.g. a locum).
2. Give them the email and temporary password. **Reset password** → **Set a new password** from their profile when needed.
3. When someone leaves, open their profile → **Deactivate** — they are signed out everywhere at once; their history stays. **Activate** brings them back.

The owner is shown at the top of Staff in a maroon card; the owner's email is never shown to others.

Who can do what

A grid of roles × permissions. Tick or untick to change a role; it applies at once to everyone with that role and is recorded. **New custom role** creates a role of your own (e.g. "Groomer"). Sensitive permissions are marked with a lock. **"See & edit phone numbers and email" is locked to the Owner** — it can't be given to any other role.

Activity log — every action, by every person

Sign-ins & sign-outs
With device and IP address, and wrong-password attempts.

Every change
Added, changed, removed — down to a single field, with before → after.

Pages opened & prints
What each person looked at and printed.

Orders, payments, cancellations
Sales, refunds, cancelled orders with reasons, deliveries.

Away, back, tab closed
Idle after 10 minutes, the return, closing the CRM.

Blocked pages
Attempts to open pages a person isn't allowed to.

Cards on top show each person's last sign-in and activity (green dot = active in the last 15 minutes). Filter by person, kind of action, record and dates. 60 entries load at a time — scroll or press **Load more**. **Entries can never be edited or deleted.**

Settings

Page	What it controls
Settings	**Clinic profile** (clinic name, tagline, address, city, phone, WhatsApp, email, website / Instagram — printed on every document) and **Species & breeds** (add, hide from lists, restore).
Vaccines & schedules	**Add a vaccine** / edit (name, company, protects against, usual dose and route). Schedules: the doses of a course and the gap between them; add or **Remove last dose**. New or changed schedules are **drafts** until a senior doctor approves them — only approved schedules suggest dates.
Reminder settings	For each reminder type (vaccine, deworming, follow-up, payment…): **Message the owner — days from the due date**, **Alert staff — days from the due date**, repeat, who is alerted if nobody is assigned, and the **Message wording** in Urdu and English.

23 Daily, weekly & monthly routines

Checklists by role. Follow them and the system stays accurate.

RECEPTION — DAILY

Front desk

- ☐ Morning: Home → Needs attention
- ☐ Due & follow-ups: call Today and Overdue, record outcomes
- ☐ Check every pet in through the queue
- ☐ Bill every visit before the owner leaves
- ☐ Unpaid bills promised today
- ☐ Tasks given to you

DOCTORS — DAILY

Clinical

- ☐ Call in from the queue in order (urgent first)
- ☐ Finalize every consultation the same day
- ☐ Set next dates for vaccines and deworming
- ☐ Review test results in the Alert centre
- ☐ Ward: check doses due at each round

STORE STAFF — DAILY

Pet store

- ☐ Home deliveries: dispatch pending orders
- ☐ Mark delivered, receive COD cash
- ☐ Switch unavailable sizes off
- ☐ Cash in drawer matches Billing at closing

OWNER — DAILY

Dr. Musab

- ☐ Messages to send (only you can send them)
- ☐ Add phone numbers reception passed on
- ☐ Approve pay-later requests
- ☐ Glance at the activity log and today's money

INVENTORY — WEEKLY

Every Monday

- ☐ Expiring in 60 days: use or return first
- ☐ Low / reorder list → order from suppliers
- ☐ Overdue borrowed / lent stock

MONTHLY

Month end

- ☐ Full shelf count
- ☐ Reports → Money for the month (export)
- ☐ Data checks: fix what's listed
- ☐ Pay suppliers, record expenses
- ☐ Campaign: birthdays this month

24 Privacy & built-in safety

Protections the system enforces on its own — in the database, not just on screen.

Pet owners' phone numbers

Phone numbers, WhatsApp numbers and email are visible **only to the hospital owner**: not on screens, prints, search, messages or the activity log for anyone else, and other staff can't search by number. The permission can't be given to another role. Addresses are visible to staff so deliveries and home visits work.

Protection	What it means for you
Role-based access	Each person only sees and changes what their role allows.
Allergy & handling alerts	Shown in red on the pet, the visit and every search result.
Locked medical records	Finalized notes, issued prescriptions and signed consents can't be silently changed; corrections need a reason and keep every version.
Surgery safety	No operation starts without consent and the pre-op check (emergencies need a reason).
No double charges	A double tap or lost connection can't create a second payment, sale or check-in.
Accurate money	Totals, discounts, refunds and balances are calculated by the database; returns refund exactly what was paid; products can't be sold at Rs. 0.
Stock never goes wrong silently	Every movement is recorded; cancellations and returns put stock back automatically.
One visit per pet per day	No duplicate tokens or bills.
Pakistan time everywhere	Dates, tokens and "today" follow Pakistan time whatever the device clock says.
Permanent activity log	Everything recorded, nothing editable.
Secure hosting	Encrypted (https) on Cloudflare; data in Supabase with database-level security rules.

25 Quick answers & glossary

Common questions, troubleshooting and the words used in the CRM.

Question	Answer
A page says I don't have access.	Your role doesn't include it. Ask the owner to adjust **Who can do what**.
I can't find a client.	Search the owner's name, the pet with the owner (`tiger ahmed`), area or ID. Only the hospital owner can search by phone.
Why can't I see a phone number?	Phone numbers are private to the hospital owner. Ask Dr. Musab to call or message the client.
I registered someone twice.	No history yet → **Ask Mr. Musab to remove** at the bottom of the page; he deletes it. With history → the owner merges the two records.
A payment was entered wrongly.	Refund or void with a reason — never re-enter it.
Notes need correcting after finalizing.	A senior doctor uses **Reopen to correct** with a reason.
A vaccine or deworming was entered by mistake.	Void it / **Entered by mistake** with a reason; the old reminder returns.
No reminder appeared for a vaccine.	The next date was left empty, or the schedule is still a draft. Set the date on the visit.
A customer cancelled their order.	**Cancel order** — refund and stock back in one step.
A product size is out of stock at the distributor.	Product → Sizes card → **not available**.
How do I delete an item?	Never used → **Delete** on its page. Already used → Edit → untick **Active** (hidden from billing and the pet store, history kept). Damaged or expired stock → **Adjust** the batch.
The stock number is wrong.	**Shelf count** or **Set the count** on the product.
The client wants everything on paper.	Full medical history → Print, or Account & statement → Statement.
"Error 1102" from Cloudflare.	The free hosting limit was hit on a heavy page. Refresh once; if it repeats, tell the owner (the $5/month Workers plan removes it).
"Your account isn't active yet".	The owner hasn't activated your account in Staff.
Someone left the clinic.	Staff → their profile → **Deactivate**.

Glossary

Word	Meaning

Owner / client	The pet's owner who pays (shown in **Pet owners**). "The owner" in admin sections means the hospital owner.
Token	Today's number for a pet in the queue; restarts daily.
Visit	One pet's attendance on one day, holding all clinical work.
Finalize	Lock a consultation as complete.
Due item	A vaccine, deworming or follow-up the pet should come back for.
Schedule (protocol)	A vaccine course: which doses and the gaps between them.
Pay later / unpaid bill	Money still owed on an issued bill, with a promised date.
Void	Cancel a bill made by mistake; it stays visible.
Write off	Accept that an owed amount won't be paid.
Advance	Money paid before the bill, used on the next bills.
COD	Cash on delivery for pet-store orders.
Batch / expiry	A lot of stock with its own expiry date.
Shelf count	Correcting stock to what is physically on the shelf.
Size group	One product sold in several weights/sizes.
Escalation	Telling the next person when a reminder is still not handled.

Bin Dawood Animal Hospital
